

The Harvenger: Ravenger of Souls - Game Review and Failure Report

This document details critical bugs, gameplay logic flaws, and UI deficiencies identified during a demo of *The Harvenger: Ravenger of Souls*. The current build is non-functional as a competitive trading card game (TCG) simulation.

I. Critical and Game-Breaking Bugs

Priority	Issue	Description	
CRITICAL	Combat Phase is Non-Functional	Creatures cannot be declared as attackers, and the	Combat Phase simply does not work whatsoever. Tapping creatures has no effect.
CRITICAL	Cheating Exploit via Game Log	Clicking on an	opponent's face-down card reveals its name and type in the Game Log (with an error message). This provides players with unfair, hidden information.
CRITICAL	Tapping/Untapping Logic Flaws	There is	no visual indication that a land is tapped (e.g., turning sideways). Tapping and untapping actions are not consistently reflected in the log or game state, causing mana availability to be unreliable. Lands may remain tapped across multiple turns.
HIGH	Inability to Play Cards	Players are frequently unable to play creatures	

Priority	Issue	Description
		or spells even when they appear to have the correct mana resources available. The game quickly becomes boring because the player can do nothing.
HIGH	Gameplay Freezes/Hangs	If there are no actions to perform in a phase, the game often does not advance automatically or respond to the 'Next Phase' button, leading to a long hang time.

II. User Interface (UI) and Visibility Issues

Issue	Recommended Solution		
Visibility of Core Elements	The	Game Log and Turn/Phase Indicator are difficult to see on PC. These must be implemented as	separate, opaque, resizable, and movable floating windows that remain visible at all times.
Insufficient Card Inspection	Clicking on a	fully expand the card image and show the complete rules text,	

Issue	Recommended Solution		
	card should	cost, and other necessary information. The current display is too small, making card text unreadable (e.g., ability text).	
Missing Log Feedback (Mandatory)	The	Game Log must explicitly state <i>why</i> an action is disallowed (e.g., "Cannot play Dwarven Castleguard: Not enough Mana Tapped," or "Cannot play card: Not your Main Phase").	
Missing System Notifications	When the system automatically draws a card for the player, a	clear notification must appear, as the action is not visible on larger screens.	
Deck and Hand Management	Players should have the option to	click and arrange cards in their hand in their preferred order. Pre-constructed decks should have a clear	indicator if they are incomplete or invalid.

III. Gameplay Logic and Mechanics

Issue	Description and Analysis	
Mana Cost Ambiguity	The notation for mana costs (e.g., " 1W ")	needs clearer definition and display. The current implementation confuses colorless vs. colored mana requirements. The display should clearly denote the number of generic mana (e.g., '1') and the number of specific colored mana (e.g., 'W').
Action Options for Cards	Cards on the battlefield need clear, visible options for interaction, such as:	"Tap for Mana," "Declare as Attacker," or "Activate [Special Ability]."
Phase Violation	A creature was successfully played during the	Draw Phase , which is a violation of fundamental TCG rules.
Ability Usage	Activating card abilities (Instants/Artifacts) is not functional and gives	no feedback in the log, even when mana is tapped.

IV. Technical/Administrative Issues

- **Title Persistence Bug:** Changes made to the game's title in the menu **do not save or stick**.

- **Public Access:** The **48-hour access limit and expiration timer** should be removed, as the game is now publicly accessible.

Suggested Solutions for Core Issues

1. Mana Cost Notation (Conceptual Fix)

To solve the confusion around **1W** (one generic, one white) vs. **W** (one white, zero generic):

Current (Confusing)	Suggested Visual Display	<i>Magic: The Gathering</i> Equivalent	
	1W	1W	One generic mana + One White mana
	W	W	One White mana only
	2WW	2WW	Two generic mana + Two White mana

2. The Final Title Display

The requested title is formatted below for the final release.

The Harvenger:
Ravenger of Souls

3. Professional Bug Report Structure

The structure used above—categorizing issues by **Critical Bugs**, **UI/Visibility**, and **Gameplay Logic**—is the recommended professional format for presenting this feedback to the developer.
